Key Concept

We are a young growing start-up developing virtual copies of reality: the digital twin. We use the latest technologies (Internet of Things, Big Data) to collect and process huge amounts of data generated by machines and processes. It is dynamic, it is 3D and it allows time travel. Curious? Join our team!

We are looking for a strong technical **full-stack developer** with a sense of aesthetics and affinity for solving complex problems.

What you will do?

Design and extend our standard digital twin backend and frontend for future projects. Adapt the existing digital twin backend and frontend to meet customer requirements.

Your profile

Background

- BSc or MSc in Computer Science
- Proficient English reading/writing (B2)
- Intermediate English speech (B1)

Personality

- Motivated to create great looking products that amaze both the team and our customers
- Independent worker
- Good knowledge of software design
- High coding and documentation standards

Knowledge/experience

Mandatory

- High-level programming (e.g. java, C/C++, …)
- SQL

Preferred

- NodeJS, Javascript, Typescript
- Unix
- Python

Advantageous

- GIT
- Docker
- Bash
- HTML, CSS
- REST, WebSockets
- JSON
- REACT

What do we offer?

- Challenges and opportunities in a young, growing company
- Work flexible (in time and location)
- International environment
- Experience with an industry sector that's shown continuous growth for decades

We are required to share the minimum gross annual payment for this job. Based on the IT collective agreement, this is EUR 2.392 gross monthly salary (full-time). Depending on your qualification we are prepared to pay EUR 42.000 or more as a yearly gross salary.
